

TERMS AND CONDITIONS OF ACCESS TO THE WIND TUNNEL

The free-fall simulator is a wind tunnel that recreates the free-fall sensation of skydiving. The wind speed varies from 120 km/h to 270 km/h depending on the weight and size of the jumper, and the type of manoeuvre in the tunnel. Jumpers are held aloft by the wind and must stay horizontal with their back arched (chest out) and arms spread. The shoulder joints, neck and lower back will be subject to the most strain.

Practical tips for a successful flight:

Please report to the entrance one hour before your flight time. For your comfort, we advise you to wear casual clothes and flat-soled, lace-up shoes. Long hair should be tied back and items of jewellery must be removed. Changing rooms and lockers are available.
